

To whom it may concern,

I am writing on the behalf of an extension to the digital millennium copyright act. I would like to voice my opinion on this. I own an iPhone 4. I have had my phone "jailbroken" for roughly 3 years. Disallowing this would be detrimental to my job... Currently, I have an app on my phone (that isn't on the regular app store) that allows my phone to have data at rest encryption, thus making it possible for me (AND ONLY ME) to access my private information on my phone. (acct numbers, credit card numbers, passwords etc.) Additionally, it would make it so I wouldn't be able to do mobile coding/programming on the go. But most importantly, it would disallow me from having REAL antivirus software on my phone. All of the above are critical things to maintain my privacy and mobile security.
