

In regards to Aereo, I believe the Supreme Court got their decision wrong. However, if we are going to proceed as if Aereo can not rebroadcast content on a one-to-one basis (one antenna to one user) then they should be allowed to operate as a cable operator.

What Aereo proposes is no different than how AT&T's Uverse product and Verizon's FiOS works. The content is delivered over a IP based network.

In all seriousness, in the end what does it matter how the content is delivered? The end result is that the consumer views the content.

Brandon Wade, Thank you
