

Regarding electronic interaction in the future, Educational Testing Service (ETS) would like to propose the use of Microsoft Lync to facilitate the copyright review process for secure test copyright registrations. Microsoft Lync Online (<http://office.microsoft.com/en-us/lync/>) is a hosted service that lets you connect with others through instant messaging (IM), video calls, and online meetings. Since ETS currently travels from Princeton, NJ to Washington, DC, Lync would eliminate our travel time and travel expenses through the use of desktop sharing and conferencing. If utilized it could also be used for other shareholders to eliminate their travel time and traveling expenses.
